

FRANKLIN OLISAEMEKA ENUNWA

Software Engineer · Full-Stack & Next.js Specialist

franklinolisaemeka3@gmail.com | +234 815 505 0634 | Akure, Nigeria | pesta-portfolio.vercel.app

PROFESSIONAL SUMMARY

Software Engineer with 4+ years of experience designing and shipping full-stack web applications across fintech, logistics, e-commerce, and civic tech. Served as CTO at 49GIG, leading end-to-end product and technical strategy for a high-trust freelance marketplace. Deep expertise in Next.js, TypeScript, and the modern React ecosystem, with a consistent track record of delivering performant, scalable, and user-centric products from concept to production.

PROFESSIONAL EXPERIENCE

Full-Stack Developer · Saverlly · Remote · United States · Contract · Aug 2026 – Present

- Architected and built Saverlly, a multi-tenant SaaS platform that brings automatic coupon savings to US internet kiosk businesses. The system spans a NestJS backend, two Next.js dashboards, a Chrome extension, and a Windows desktop agent in a single monorepo.
- Built a Chrome extension that detects checkout on affiliated stores, tests available coupon codes, and applies the best one, while tracking affiliate attribution per store and respecting affiliate step-down rules.
- Designed per-order commission tracking with configurable per-kiosk revenue shares, a 30–90 day pending-to-confirmed commission lifecycle, and automated kiosk-owner payouts via Stripe Connect.
- Developed a Windows agent for fleet deployment across locations of 5–30+ computers. It uses Chrome enterprise policy to keep the extension installed through kiosk session resets and displays on-screen announcements.
- Delivered the Admin Console and Kiosk Portal with Next.js, TypeScript, shadcn/ui, Tailwind CSS, Zustand, and TanStack Query, with role-based access and strict tenant isolation. The platform is covered by unit and integration tests and documented with auto-generated OpenAPI/Swagger specs.

Chief Technology Officer (CTO) · 49GIG · Remote · Full-time · 2025 – Present

- Led all technical strategy, architecture decisions, and engineering execution for a high-trust freelance marketplace connecting vetted talent with pre-funded client projects.
- Designed and built the full platform from the ground up using Next.js, TypeScript, Convex, and Flutterwave, covering escrow-based payments, talent verification flows, real-time job feeds, and in-app messaging.
- Implemented a rigorous vetting and onboarding pipeline ensuring platform integrity and high client-to-talent trust scores.
- Owned the full product lifecycle: from wireframing and database schema design to deployment, monitoring, and iteration based on user feedback.
- Managed technical decisions around scalability, security, and third-party integrations to support platform growth.

Full-Stack Developer · Helen's Beauty Secret · Remote · Contract · 2026

- Built a full-featured certified organic skincare e-commerce platform (helensbeautysecret.com) using Next.js and TypeScript, covering product catalog, shopping cart, and checkout flows.
- Implemented SEO optimization strategies — meta tags, structured data, and image optimization — to improve organic search visibility for beauty and skincare keywords.
- Delivered a clean, mobile-first storefront with Tailwind CSS and shadcn/ui, optimized for fast browsing and high conversion on product pages.
- Integrated payment processing and order management workflows to support the brand's direct-to-consumer sales model.

Full-Stack Developer · Aztran Global Investments Limited · Remote · Contract · 2026

- Designed and delivered the institutional website (aztranlimited.com) for a SEC-licensed Nigerian investment firm specializing in asset management, global markets, and brokerage.
- Built the platform using Next.js and TypeScript with a CMS-driven insights and research section, enabling the team to publish macro reports, desk briefs, and market commentary.
- Implemented a performance-optimized, SEO-structured frontend targeting institutional and high-net-worth audiences, with full support for the firm's services and advisory offerings.
- Configured Cloudflare DNS, CDN, and Vercel deployment for production-grade reliability and global content delivery.

Frontend Developer · Pfhix Technologies · Nigeria · Full-time · 2022 – 2023

- Built and maintained the company's public-facing web platform for security solutions using Next.js, Tailwind CSS, shadcn/ui, and Google APIs.
- Optimized page load performance by 40% through image optimization, lazy loading, and bundle splitting strategies.
- Collaborated with design and product teams to translate Figma mockups into pixel-perfect, responsive, and accessible interfaces.
- Integrated Google APIs for location-based features central to the company's security product offering.

Full-Stack Developer · Tubira · Remote · Contract · 2025

- Developed the Tubira Affiliate Platform — a unified vacation and travel marketplace for flights, hotels, and activities with a single checkout experience.
- Integrated Stripe for payment processing and Convex for real-time data synchronization across the platform.
- Built affiliate tracking and referral management dashboards using Next.js, TypeScript, and Zustand for state management.

Full-Stack Developer · Dishpatch · Remote · Contract · 2024

- Engineered two separate web portals — one for restaurant order and earnings management, one for rider delivery tracking and earnings — as part of a full food delivery ecosystem.
- Implemented real-time order status updates and live rider location tracking using Socket.IO and Google Maps API.
- Built Redux-powered state management for complex multi-step order flows across both portals.

Full-Stack Developer · Cabwire · Remote · North America · Contract · 2024

- Built the web platform for a ride-hailing startup focused on a fairer, more human experience for drivers and riders launching across North America.
- Designed and implemented the database schema using NeonDB (PostgreSQL) and Drizzle ORM, prioritizing scalability for a multi-city launch.
- Developed driver and rider-facing dashboards with Next.js, TypeScript, and shadcn/ui, with an emphasis on clean UX and fast page performance.

Full-Stack Developer · Linked Cart · Remote · Contract · 2024

- Built a citywide multi-vendor shopping and delivery platform connecting users to stores, malls, and restaurants in a single application.
- Designed a multi-tenant product catalog and checkout system using Next.js, NeonDB, and Drizzle ORM.
- Delivered a responsive, mobile-first UI with Tailwind CSS and shadcn/ui optimized for fast browsing and seamless ordering.

Full-Stack Developer · BenjaFamily Labs · Remote · Contract · 2024

- Developed a finance research and advisory web platform providing market insights, trend analysis, and investment data for clients.
- Integrated Google Cloud services for infrastructure and built dynamic data visualization components to present complex financial data accessibly.
- Delivered a performant, SEO-optimized Next.js application with Tailwind CSS and shadcn/ui.

Full-Stack Developer · Odera Helping Hand Foundation · Remote · Contract · 2024

- Built the foundation's web presence — a platform for a non-profit providing support and resources to families in need.
- Implemented donation flows, resource listing pages, and contact management using Next.js, NeonDB, and Drizzle ORM.
- Delivered a compassionate, accessible UI with Tailwind CSS and shadcn/ui aligned with the foundation's brand and mission.

PERSONAL PROJECTS

Tickethub — Event Ticketing Platform — *Next.js · TypeScript · Convex · Clerk · Paystack · shadcn/ui*

- Full-featured event ticketing app where users can create, manage, and purchase tickets with secure Paystack payments, Clerk authentication, and automatic refund handling.

NYSC CDS Attendance & Documentation System — *Next.js · TypeScript · Convex · TanStack Query · Zustand*

- QR-code-based attendance platform for NYSC CDS groups in Akure South LGA, replacing manual roll calls with real-time dashboards and automated report generation — reducing administrative overhead by ~80%.

TECHNICAL SKILLS

Languages TypeScript, JavaScript (ES2022+), HTML5, CSS3, SQL

Frameworks Next.js (App Router & Pages), React, Node.js, Express, NestJS

Databases PostgreSQL (NeonDB), MongoDB, Convex (real-time BaaS), Redis

ORM / Query Drizzle ORM, Prisma, TanStack Query

State Mgmt Zustand, Redux Toolkit, React Context API

UI / Styling Tailwind CSS, shadcn/ui, Framer Motion, Figma

Payments Flutterwave, Stripe (incl. Stripe Connect), Paystack

Auth Clerk, NextAuth.js

Real-Time Socket.IO, Convex subscriptions

Jobs & Scraping BullMQ, Playwright

Testing Jest (unit & integration)

Cloud/DevOps AWS, Google Cloud, Vercel, Cloudflare, Docker, GitHub Actions

APIs & Tools Google Maps API, RESTful APIs, OpenAPI/Swagger, Webhooks, Postman, Chrome Extensions (Manifest V3)

EDUCATION

B.Sc. Computer and Robotics Education · University of Nigeria, Nsukka · 2019 – 2023

- Built Cresa Repo — a department-wide academic thesis and project management platform (Next.js, MongoDB, Clerk) as a capstone project.
